

SHIVAM KOTAK

Los Angeles, CA-90007 | (213) 414-9656 | skotak@usc.edu | [LinkedIn: shivamkotak](#) | [Github: t3ds](#)

EDUCATION

University of Southern California, Los Angeles, CA

January 2022-Present

Master of Science in Computer Science

CGPA:3.71

Relevant Coursework: Analysis of Algorithms, Database Systems, Foundations of AI, Applied Natural Language Processing, Web Technologies, Machine Learning

University of Mumbai, Mumbai, India

July 2021

Bachelor of Engineering in Computer Engineering

CGPA:9.08/10

Relevant Coursework: Discrete Structures, Big Data & Analytics, Database Management Systems, Natural Language Processing

EXPERIENCE

Cloud Counselage Pvt Ltd, Mumbai, India

Machine Learning Intern

March 2020-July 2020

- Developed an Event Recommender System by extracting domain and type of an event such as seminars, hackathons, expos, etc., from the event headline and selects employees to whom an event can be recommended to.
- Incorporated concepts of TF-IDF, lemmatization and linear support vector classifier to build the model

TECHNICAL SKILLS

- Programming Languages:** Python, C, C++, Java | **Web Development Stack:** HTML, CSS, Vanilla JS, React JS, Angular, Typescript, PHP, Flask, AWS, GCP, Node.js, Android, Express.js | **Database:** SQL, Oracle SQL, PostgreSQL, MongoDB
- Frameworks and Tools:** TensorFlow, PyTorch, JavaFX, Keras, Microsoft PowerBi, OpenCV, Git, XGBoost, scikit-learn, SpaCy, nltk

ACADEMIC PROJECTS

Stock Price Prediction – [Link to Repo](#) – Python, TensorFlow, Flask, React.js

- Predicted end-of-day share price for a company on the National Stock Exchange using the **Keras** library in Python by employing a **CNN-LSTM** neural network.
- Collated historical data using a python library and evaluated data based on technical indicators such as **RSI**, **MACD** etc
- Trained a prediction model based on past 4-5 years data. Predicted values within a variation of approximately **10-15%** of the actual price.

Manga Downloader – [Link to Repo](#) – Java, JavaFX, Web Scraping, HTML Scraping, Selenium, BeautifulSoup4

- Developed an application that takes input as a name of a Japanese comic and then lists and downloads chapters of a comic
- Coded in **Java**, using **JavaFX** for the UI. It works by parsing the HTML of a source website (mangadex.org) for identifying, listing, and downloading chapters.

Football Commentary Guided Player Rating Prediction – [Link to Repo](#) – Python, PyTorch

- Used **BERT** and **XLNet** to encode commentaries to test on different models (Both Classical and Deep Models) with Negative Log Likelihood loss and MSE loss. The best result had a loss of **0.35** which was achieved with XLNet and an LSTM model.
- Gathered data by collating from multiple datasets and API. Final processed dataset can be found on Kaggle at: [Football Player Rating, Stats and Event Commentary](#)

Event Search Website – [Link to Webpage](#) – Angular, Typescript, HTML, CSS, Bootstrap, JavaScript, NodeJS

- Created a **responsive** single-page web application to search for events using the TicketMaster API. The webpage allows the user to search for events using keywords, distance, manual location as well as location auto-detection.
- The webpage gives detailed event and venue information including seat map and ticket-status, artist information, location, genre, time and date, and relevant links and also allows users to favorite events and store those events in LocalStorage.

CERTIFICATIONS

- Generative Adversarial Networks (GANs) Specialization by DeepLearning.AI via Coursera
- Introduction to Data Science in Python by University of Michigan via Coursera
- Applied Plotting, Charting & Data Representation in Python by University of Michigan via Coursera
- 'Fundamentals of Deep Learning for Computer Vision' offered by the Nvidia Deep Learning Institute
- 'Neural Networks and Deep Learning' offered by DeepLearning.AI via Coursera

LEADERSHIP AND INVOLVEMENT

- Secured 1st Place at the college round of the National Smart India Hackathon, 2020. Worked with the team to build a prototype of an autonomous drone delivery system using various technologies such as python, android etc.
- Achieved Rank 61 out of 6768 competitors Richter's Predictor: Modeling Earthquake Damage competition by DrivenData.
